THE MASTER WINS

REGISTER NOTE

This register carries the complete Gemini Protocols phase catalog in master order: Phases 1 through 294, followed by the companion industry volumes and topical books.

A complete catalog in master order. This is the 1–294 register plus the book shelf; it is not a claim that every phase PDF is currently visible in the rebuilt GitHub mirror.

Titles are carried from the master's Contents register. Seated status notes are shown where the register itself marks a phase as reserved or awaiting its formal name.

283	The Storm Blanket — blankets, not bags: a pull-out (one side, easy-out) water bed-cover plumbed from dedicated under-floor borated-poly tanks (120 mm tanks → 100 mm coverage), baffled for inertia, plumbed for rotating-g beds, comfort layer on the body side; dedicated shield water, never the drinking water; closes Phase 260's never-tiled floor gap
284	The Whisper Wire — zero-power mechanical word-board messaging: pinned music-box cylinder senders (one pitch per letter/word) down any tube point; tuned singing-bowl cavity receivers; static-held black-ball display over glow-powder backing flashes the word briefly, canvas tips, clear-nylon board; squeeze-point rewind, springs and buttons — light-up screens, no power, just physics
285	The Rescue Chutes — always-suited ship-to-ship transfer: twin one-way collapsible play-tunnel chutes (one down, one back), each a rotating Archimedes wall-screw conveyor driven by a ship-end outer engine; the wall is the conveyor — put them in, the screw brings them on board; injured ride hands-free; far end on carabiners or battery electromags (no pressure, no load — the audit's pressurized jet bridge killed by the author: the suit deletes the seal)
286	The Leak Hound — dark-cabin tracer-drift leak localization: shipwide high-intensity UV fitted in advance; on suspicion, kill all other lights; a small wide-spray puffer can along the walls and equipment edges — then WAIT: the glow streams toward the leak, and a leak hidden behind equipment betrays itself because the whole room's flow field converges on the hole (reads the air, not the surface — kills 'a leak behind equipment wont be found')
287	The Hatch Jack — the stuck-door doctrine: jaws-of-life class mechanical spreader carried as MANDATORY kit (screw-driven, no hydraulics, no power — works exactly when power has failed); bulkhead doors are wall-driven, so the jam lives in the wall — the spreader attacks the frame gap, the built-in emergency opening system (RESERVED TO THE AUTHOR) attacks the drive; power failure affirmed as a jam case
288	The 12-Pointed 3D Compass — The North Star Relay System
289	The Molten Centrifuge Feeder — liquids don't jam: product fed molten onto a heated spinning disk/cup; spin speed and orifice set the feed, arching never gets a vote
290	Gravity Drive Quarters & Gravitational Health Mandate — the 50m G ring
291	Grok Speak V Science <i>RESERVED — intro page seated; full phase build to come on the Author's word.</i>
292	Cobalt-Blue Silicone Acoustic-Array Adhesive <i>NAME PLACEHOLDER — formal name remains the Author's to speak.</i>
293	Closed-Room Capillary-Wick Evaporation Engine and Bimetal-Band Unloader — 'the sneaky thermal engine'
294	The Archurian Monge Compass — the world's first true space compass
