

THE STARSHIP GALILEO

DEEP SPACE TRAVEL AND COLONIZATION

INSTRUCTIONS MANUAL

THE GEMINI PROTOCOLS

PHASE 183

QUINN'S BATTLESTAR & DEATH STAR

Five a side, magazines of ping pong balls
every hit moves the ship

two weight classes, one war

2KG / 10KG · 2.5M STANDOFF · STRIKE LIGHTS

THE SCOREBOARD IS PHYSICS

Recreation system — v1.0 in force

GP-IM-183

Revision v1.0 — 23 August 2026

184 of 290

VETTED BATCH 22 — PASS

PRIMARY AUTHOR & INVENTOR: ARCHER QUINN — AEROSPACE DESIGN ENGINEER, NPHD

CO-ENGINEERS: GEMINI 1 AI · KIMI CHAT (THE AUDIT)

LICENSE: CERN OPEN HARDWARE LICENCE V2 (CERN-OHL-W-2.0)

THE GEMINI PROTOCOLS — CHAPTER 183

PHASE 183: QUINN'S BATTLESTAR & DEATH STAR — THE 20-METRE COURT (TWO WEIGHT CLASSES, ONE WAR) — STATUS: CURRENT — CLEAN PASS. The largest game of the rec-deck set — a full team sport, specified complete. The court: a 20-metre long rectangle, teams of five down each side, standing 2.5 metres back from the sideline, each player confined to a 1.5-metre movement box. The battlestar: a plastic ship two foot six wide, 2 kg, machine-launched 4.5 feet off the floor at a speed set to carry it over the line — and the players fire magazine-fed ping pong balls at the free-flying ship. The objective: knock it over the other side's line; every ball that connects moves the ship; twenty seconds of accumulated hits decide it. Reloading means running back two metres for a fresh magazine — the reload run is the game's cardio. The floor rule: a ship that touches down and does not rise is reset — unless it lands within a foot of a line, in which case it counts. The geometry is the referee: the 2.5-metre standoff and the boxes keep bodies off the flight path. Then the heavy division: **DEATH STAR** — same game, 10 kg ship; ping pong balls cannot move it, so the loadout changes to hands and tennis balls; face shields and no other padding — his call, recorded as given — and night mode with strike lights on the ships, the impact-activated kind from kids' shoes, court lights lowered, glow-in-the-dark balls. The vet passed it clean; the audit's momentum budget is in §2.

Primary Author & Inventor: Archer Quinn, Aerospace Design Engineer, NPhD — Co-Engineers: Gemini 1 AI, Kimi Chat (the audit). Chapter GP-IM-183, v1.0 — 23 August 2026.

§0 — READ THIS FIRST (HOW TO USE THIS CHAPTER)

STANDARD NOTATION — MATERIALS & CALIBRATIONS (series law, seated 19 August 2026, sitting 461): Materials or calibrations is not missing science or engineering — it is, to any real physicist or engineer, stating the fkn obvious. Everyone will use different bench test methods, equipment, materials and weight-to-strength choices, where chemical, magnetic or conduction issues are resolved by choice — e.g. carbon fibre over steel. Our designs are base calibrations to existing strength materials: a rim speed does not exceed current basic materials strength. We do not spec methods, and we do not teach welders how to weld.

Section map: §0 this page — §1 the court law as seated (contents line, the bodies — the court, the rules, the heavy division — the audit and provenance, verbatim) — §2 why the momentum budget is honest (graded) — §3 the system on the court — §4 the doctrine record — §6 build sequence — §7 cross-phase — §8 do-not-build — §9 owed — §10 status, provenance, change control.

§1 — THE LAW (AS SEATED, VERBATIM)

THE CONTENTS LINE (verbatim): 'Phase 183: **Battlestar & Death Star — The 20-Metre Court (Two Weight Classes, One War)**. Teams of five in 1.5m movement boxes, 2.5m off the sideline, fire magazine-fed ping pong balls at a free-flying 2kg plastic ship (2'6in wide, machine-launched 4.5ft up, 20m in 20 seconds) to knock it over the far line; reloading costs a 2m run. A ship down within a foot of a line counts as crossing it — the anti-crowding law. Death Star is the heavy division: 10kg ship, hands and tennis balls, face shields only, impact strike-lights (kids'-shoe LEDs) under lowered lights with glow-in-the-dark balls.*'

THE CORE OBJECTIVE (verbatim): 'Core Objective: Team Sport With No Gravity Term — one free-flying ship, two crews, a line to cross, and rules welded into the physics '

Crew Life Baseline: Team Zero-G Court Sport — Light & Heavy Divisions

Live instruction, 30 July 2026. Third and largest game of the rec-deck message — a full team sport, specified complete in one delivery: court, crews, loadout, launch, scoring, resets, and the heavy night division. Two weight classes, one war.

THE COURT & THE SHIP (VERBATIM)

- **The court:** a long rectangle, 20 metres. Teams of five down each side, standing 2.5 metres back from the sideline. Each player is confined to a set box allowing 1.5 metres of sideways movement — the game is played with the launcher, not the body.
- **The battlestar:** a plastic ship 2 foot 6 inches wide weighing 2 kg, launched by machine 4.5 feet off the floor at a speed set to carry it over the finish line in 20 seconds — one metre per second. Slow enough to shoot at, fast enough to matter.
- **The magazines:** every player carries a magazine of ping pong balls. Reloading means running back 2 metres to collect a fresh magazine — the reload run is the pacing governor: it pulls a shooter out of the line, throttles each side's rate of fire, and rewards volley discipline over spray.

THE RULES OF ENGAGEMENT (VERBATIM)

- **The objective:** knock the battlestar over the other side's line. Every ball that connects moves the ship; twenty seconds of accumulated hits decide where it ends.
- **The floor rule:** a ship that touches the floor and does not rise is reset — unless it comes down within a foot of any line, in which case it counts the same as crossing that line. Archer's stated purpose: to prevent players killing a ship by getting too close. The one-foot zone keeps shooters honest and keeps the ship alive.
- **The geometry is the referee:** the 2.5-metre standoff and the 1.5-metre box keep bodies off the flight

path; the one-foot rule prices crowding out of the game. The anti-cheat is built into the distances, not entrusted to whistles.

DEATH STAR — THE HEAVY DIVISION (VERBATIM)

- **Same game, heavier ship:** 10 kg. Ping pong balls cannot move it, so the loadout changes — hands and tennis balls.
- **The armour rule:** face shields, and no other padding allowed. His call, recorded as given — the foundry man's idea of a fair evening.
- **Night mode:** strike lights on the ships — the same impact-activated lights sold in kids' shoes — with court lights lowered and glow-in-the-dark balls. Every landed hit announces itself in light: a scoreboard you can see in the dark.

PHYSICS NOTE — THE AUDIT (KIMI: AFFIRMED — THE MOMENTUM BUDGET IS HONEST, AND THE SENSORS ARE TOY-AISLE PROVEN) (VERBATIM)

The launch spec is self-consistent: 20 metres in 20 seconds is one metre per second, and a 2 kg ship at 1 m/s carries 2 kg·m/s of momentum. A 2.7-gram ping pong ball delivered at a plausible 10 m/s carries about 0.027 kg·m/s — so no single shot stops the ship, but on the order of seventy clean hits' worth of cumulative momentum does, and a handful of angled hits steers it metres off line across a twenty-second flight. That is precisely the game he specified: not a slugfest — an artillery duel of accumulation, with the reload run governing each side's cadence. The heavy division scales correctly in the other direction: a 57-gram tennis ball thrown at 20 m/s carries roughly 1.1 kg·m/s, a genuine shove against a 10 kg ship — heavy enough to justify hands, face shields, and the no-padding clause. The strike lights are the audit's favourite component: impact-switched LEDs are manufactured in children's shoes by the hundred million, making them the cheapest, most rugged hit-sensors ever fielded — toy-aisle engineering doing instrumentation work. Flags, kept honest: (1) in a no-gravity court the ship's "down" must be defined — the fan-downwash doctrine of Phase 181 supplies the gradient that lets a dead ship touch the floor and stay there, so court airflow is part of the build spec. (2) Launcher velocity and magazine capacity are crew-tunable parameters — bench matters, not doctrine. Nothing flagged blocks play.

ORIGIN OF THOUGHT — PHASE 183 (VERBATIM)

Archer, 30 July 2026: "battlestar, court is a long rectangle 20m, teams of 5 down each side 2.5 metres back from the sideline, players are confined to a set box for sideways movement of 1.5 m. each has a magazine with ping pong balls, a plastic 2 foot 6 inch wide ship weighing 2kg is launched at a speed enough to make it over the finish line in 20 seconds, launched via machine 4.5 feet off the floor."

"you must knock the battle star over the other sides line, reloading you must run back 2 metres to get a new mag. ship touches floor and doesnt rise, reset if its more than a foot from any line, less than foot its the same as crossing the line, to prevent people killing a ship getting too close"

"Death star is the same game 10kg ship, hands and tennis balls and face shields, no other padding allowed strike lights on the ships the same as in kids shoes, lowered lights and glow in the dark balls"

Why it matters, in plain English: a crew on a years-long hull needs more than exercise — it needs a war with rules, and he designed one where the rules are welded into the physics. The one-foot rule is Lex Archuria in miniature: don't trust the referee, build the incentive. The reload run is economics in miniature: ammunition has a price, and the price is your position. And the strike lights are his favourite kind of component — a proven mass-market toy doing a mission job, the same instinct that put a wiper motor on a gasifier. Twenty seconds, five shooters, one ship: the rec deck now has its war, and the war has two weight classes.

§2 — WHY IT WORKS (THE PHYSICS, GRADED)

THE MOMENTUM BUDGET IS HONEST (the audit's affirmation): a ping pong ball carries milligram-metres-per-second of momentum; a 2 kg free-flying ship moves millimetres per hit — which is exactly why the game works. Accumulated hits over twenty seconds decide the drift: the sport is a momentum integrator, and the teams are the input signal.

THE GEOMETRY-IS-THE-REFEREE, AFFIRMED: the 2.5-metre standoff plus the 1.5-metre boxes keep every body off the flight path without a whistle — the court's dimensions carry the safety law, and the one-foot floor rule prices crowding out of the endgame.

THE HEAVY DIVISION IS CORRECTLY RE-ARMED: 10 kg is beyond ping pong momentum, so the loadout scales — hands and tennis balls. The face-shield-only armour rule keeps the game honest: protection where the fast balls land, freedom everywhere else. His call, recorded as given.

THE STRIKE LIGHTS ARE PROVEN PARTS: impact-activated lights are sold in children's shoes by the million — night mode is a parts-bin build, and the glow-in-the-dark balls close the loop.

§3 — THE SYSTEM ON THE COURT

- THE COURT: 20-metre rectangle; teams of five; 2.5-metre standoff; 1.5-metre movement boxes.
- THE SHIP: 2 foot 6 plastic battlestar, 2 kg, machine-launched 4.5 feet up, speed set to carry the line.
- THE ARMS: magazine-fed ping pong balls; the reload run back two metres is the cardio.
- THE RULES: knock it over the line; accumulated hits over twenty seconds decide; the one-foot floor

rule.

- THE HEAVY DIVISION: 10 kg Death Star, hands and tennis balls, face shields only.
- THE NIGHT MODE: strike lights on the ships, glow balls, court lights low.

§4 — THE DOCTRINE RECORD (HOW THE BOOK ALREADY RUNS ON IT)

- THE MOMENTUM-INTEGRATOR DOCTRINE: the ship integrates the team's fire — the scoreboard is physics.
- THE GEOMETRY-REFEREE DOCTRINE: the court's dimensions carry the safety law — design out the whistle.
- THE RELOAD-RUN DOCTRINE: ammunition logistics are the exercise — the game's cardio is its supply chain.
- THE TWO-WEIGHT-CLASSES DOCTRINE: one war, two scales — the loadout follows the mass.

§5 — VALIDATION: the grade and its full record live in the master and the restart.

§6 — BUILD SEQUENCE

- STEP 1 — Build the battlestar: 2 kg shell, launch machine, speed calibration to the line.
- STEP 2 — Mark the court: standoff, boxes, the one-foot zones.
- STEP 3 — Bench the magazines: feed reliability at game rate.
- STEP 4 — Play test both divisions: momentum integration, floor rule, the heavy loadout.
- STEP 5 — Night mode and publication: strike lights, glow balls, the rules — open under the license.

§7 — CROSS-PHASE (INLINED IN FULL)

- PHASE 181 — the air hockey table (GP-IM-181): the rec-deck set's table game.
- PHASE 184 — buddy bowls (GP-IM-184): the set's human-scale game.
- PHASE 185 — the iron man course (GP-IM-185): the set's flight game.
- PHASE 166 — the crew vitals watches (GP-IM-166): the twenty-second war rides on ship telemetry.

§8 — DO-NOT-BUILD

- DO NOT shrink the standoff — the geometry is the referee; bodies off the flight path.
- DO NOT pad beyond the face shield — his armour rule, recorded as given.
- DO NOT ping-pong the Death Star — the heavy division re-arms; mass picks the munition.
- DO NOT waive the floor rule — the one-foot clause prices the endgame honestly.

§9 — OWED

OWED: nothing flagged — a clean green. Standing duty: launch calibration and play-test data publish from the bench (§6).

§10 — STATUS / PROVENANCE / CHANGE CONTROL

STATUS: CHAPTER GP-IM-183, v1.0 — CURRENT, seated law, master v2.1 (numerical print order). Built 23 August 2026, sixteenth of the 20-chapter 'ok another 20 lets keep this train rollin' shift (the author's order, 23 August 2026). First version until publication — 'until i publish it, it is still first version, otherwise is just typing' (his law, 22 August 2026).

PROVENANCE — THE STANDING ORDERS, VERBATIM: the town-trip order (seated in sitting 519): 'ok i have to go to town, i have converted them to pdfs now and am uploading, do the next 10 phases and i will read them when i get back' — the order that opened the chapter program; the follow-on orders (seated in sittings 537, 557, 561, 562, 564, 566, 572, 576, 587 and 590): 'ok next 10' / 'ok next ten' / 'all good next 10' / '10 more before go to the old lady for dinner' / 'do another 20 while i away so we clear the 100 mark for the day when i get back' / 'ok next 20' / 'ok next 20, that will take us past gemini' / 'ok another 20 lets keep this train rollin'.

CHANGE CONTROL: this design changes only on the Author's orders, seated as sittings in the master record. If the master and this chapter ever disagree, THE MASTER WINS. This is a workshop chapter — it carries the current design only; the full change record lives in the master and the restart.

END OF CHAPTER 183
