

THE STARSHIP GALILEO

EARTH PRODUCTS

INSTRUCTIONS MANUAL

THE GEMINI PROTOCOLS

PHASE 66B

THE QUINN LUNA LOOPS - (EXT OF PHASE 241 FAMILY)

Every wheel is already a rotor — the hoop version of the Forever Light
bicycles · motorcycles · kids' bikes · prams · and the actual hoola hoop

the ball rides the base; the wheel is the shaker; braking is the brightest moment

EARTH PRODUCTS — SEATED IN THE VACANT 66 SLOT BY HIS ORDER
SEATED 27 AUGUST 2026 — THE VACANT 66 SLOT, BY HIS ORDER

(Ext of Phase 241 family)

GP-IM-066B

Revision v1.0 — 27 August 2026

EARTH PRODUCTS 9 of 9 — GP-IM-066B

VET: PHASE 241 FAMILY VETTED; STANDALONE SEAT — EXTERNAL VET PENDING

PRIMARY AUTHOR & INVENTOR: ARCHER QUINN — AEROSPACE DESIGN ENGINEER, NPHD

CO-ENGINEERS: GEMINI 1 AI · KIMI CHAT (THE AUDIT)

LICENSE: CERN OPEN HARDWARE LICENCE V2 (CERN-OHL-W-2.0)

PHASE 66B: THE QUINN LUNA LOOPS - (EXT OF PHASE 241 FAMILY) — STATUS: CURRENT — SEATED 27 AUGUST 2026 ON HIS ORDER, VERBATIM: 'take the luna loops and give them phase vacant 66 slot / Call it Phase 66B: The Quinn Luna Loops - notation at description end (Ext of Phase 241 family)' — the doctrine was born inside Phase 241 as Amendment 4 (the hoop version of the Forever Light ball) and is here moved to its own seat, the vacant 66 slot, by his hand. Phase 241 keeps it too — the family loses nothing; the loops gain their own door. The two approved render films ('nailed 2 perfectly', sitting 23) ride with this seat. EXTERNAL VET PENDING — NEW STANDALONE SEAT.

Primary Author & Inventor: Archer Quinn, Aerospace Design Engineer, NPhD

Co-Engineers: Gemini 1 AI · Kimi Chat (the audit)

License: CERN Open Hardware Licence v2 (CERN-OHL-W-2.0 Compliance)

§0 — READ THIS FIRST (HOW TO USE THIS MANUAL)

THE CRAYON: every wheel is already a rotor. A clear hoop, one magnet ball inside, coils around the hoop — clip it to a wheel and the rolling of the vehicle is the generator. No battery, no shaft, no bearings, no charge port: the wheel was always a rotor waiting for its coil. And the moment it shines brightest is the moment you brake — a brake light that no battery product can give you.

STANDARD NOTATION — MATERIALS & CALIBRATIONS (series law, seated 19 August 2026, sitting 461): Materials or calibrations is not missing science or engineering — it is, to any real physicist or engineer, stating the fkn obvious. Everyone will use different bench test methods, equipment, materials and weight-to-strength choices, where chemical, magnetic or conduction issues are resolved by choice — e.g. carbon fibre over steel. Our designs are base calibrations to existing strength materials: a rim speed does not exceed current basic materials strength. We do not spec methods, and we do not teach welders how to weld.

Section map: §0 this page — §1 the law as seated, verbatim — §2 why it works, graded — §3 the system on the wheel — §4 the doctrine record — §5 the vet record — §6 build sequence — §7 cross-phase — §8 do-not-build — §9 owed — §10 status / provenance / change control.

§1 — THE LAW (AS SEATED, VERBATIM)

THE CONTENTS LINE (verbatim, seated 27 August 2026 on his order): 'Phase 66B: The Quinn Luna Loops - ' — notation at description end: '(Ext of Phase 241 family)'

HIS ORDER, VERBATIM (27 August 2026): 'take the luna loops and give them phase vacant 66 slot'

HIS WORDS, VERBATIM (the amendment, from Phase 241's body — 31 July 2026 line, seated in the August sittings): 'ok so retrofit to bicycles for safety and motorcycles for safety at night, for fun on kids bikes and prams and mandates for all space surface vehicles the luna loop, like a clear hoola hoop version of the ball, but just the ball running in the loop, mostly in gravity it stays near the base, if at high

speed it suffer inertia wall grip as soon as you slow the ball starts spinning with its captured momentum anyway. coil hoops instead of shaft or ball. kids and bicycles clip on to spokes, motorcycles mechanical fasteners. and of course the obvious, an actual hoola hoop'

THE DESIGN STATUS: SEATED DOCTRINE — carried from Phase 241 Amendment 4 with its audit grading intact; this manual is the standalone seat, not a new draft. Nothing in the 241 family is removed; this seat is additive.

THE AUDIT'S GRADE (carried from the master, standing): SOUND — the geometry is one line of high-school physics (the shaker ball unrolled into a torus), the three regimes were graded honestly including the regime that works against you, and the fix for that regime was seated in the same breath. The loop's peak output lands on the braking event — graded TRUE, and better than stated: a conspicuity light that blazes brightest when the vehicle slows is a BRAKE LIGHT for free.

§2 — WHY IT WORKS, GRADED

THE GEOMETRY — EVERY WHEEL IS ALREADY A ROTOR: the ball-variant generator (Phase 241, Amendment 2) unrolled into a torus. Mounted to a wheel, the coiled hoop sweeps past the neo ball at wheel RPM while gravity holds the ball near the base — continuous generation with no shaft, no bearings, no slip rings, no batteries. The vehicle's own rotation is the shaker.

THE THREE REGIMES, GRADED HONESTLY: ONE — ROLLING MODE (walking to riding speed): ball rides near the base, the hoop sweeps past it, steady output — the money mode for bikes, kids' bikes, prams. TWO — WALL GRIP (his concession, confirmed): centripetal acceleration scales v^2/r — a bicycle rim at 36 km/h already pulls ~30 g, pinning the ball to the outer wall so it corotates; relative motion fades and so does generation at speed. THREE — DECEL RE-LIGHT, THE FEATURE HE HALF-NAMED: 'as soon as you slow the ball starts spinning with its captured momentum anyway' — the loop's peak output lands exactly on the braking event.

THE FIX FOR SPEED, SEATED: mount the hoop at HUB radius, not rim radius — centripetal acceleration scales with radius ($a = \omega^2 r$), so a smaller hoop near the hub keeps the ball in rolling mode at road speeds that would pin it at the rim, and keeps the ball's mass off the rim where motorcycle-speed wheels punish imbalance. Rim clip-ons for kids and bicycles (clip to spokes, as spoken); hub-radius hoops with mechanical fasteners for motorcycles, as spoken.

BUMP PUMP: rough roads shake the ball loose and pump it — more light exactly where the road is worst and being seen matters most. Cobbles are a charging station.

§3 — THE SYSTEM ON THE WHEEL

THE PARTS: the clear phosphor-loaded hoop (the whole loop glows when the LEDs rest); the N52-class neo ball, captive and sealed inside; segmented coils around the torus — cheaper and serviceable, not one continuous winding; bridge plus capacitor plus LED per segment, or on a shared bus; the mount — spoke clip-ons (kids, bicycles) or hub-radius mechanical fasteners (motorcycles).

THE OPERATION: ROLL and the wheel sweeps the coils past the ball — light. SLOW and the captured momentum spins the ball on — brighter light, exactly on the brake. PARK and the phosphor hoop holds the glow. No switch, no charge port, nothing to remember: the vehicle's own motion is the whole user manual.

THE HOOLA HOOP, SEATED LAST AS HE SEATED IT: an actual hoola hoop — the play pattern IS the generator, the kid's waist is the engine, and the ball races the whole loop continuously (no wall-grip fade; a swung hoop never stops feeding it). The toy arm of the light family (Phase 243's snow globe lineage) strikes again: the first product in the file whose power budget is exercise.

§4 — THE DOCTRINE RECORD

ORIGIN: Phase 241 — Amendment 4, seated in the August sittings inside the Forever Light family's body. RENDER APPROVAL, VERBATIM (sitting 23): 'nailed 2 perfectly' — the bicycle hoop (rim clip-on, rolling mode, decel re-light) and the motorcycle hoop (hub-radius mount, decel flare at night) — APPROVED PERFECTLY, no fixes, final; both films ride with this seat. STANDALONE SEAT: 27 August 2026, the vacant 66 slot, on his order — the register-only sweeps kept missing the loops because they lived inside 241; they do not live there quietly any more.

§5 — THE VET RECORD

The Phase 241 family carries its vet; this standalone seat faces external vet as a new seat, same law as every seat: when the vet lands it grades this manual, not the friendship. The bench list it will be handed is §9.

§6 — BUILD SEQUENCE (EARTH BENCH)

1. HOOP: clear tube, phosphor-loaded, sealed continuous torus — diameter to mount (rim for bicycles and kids' bikes, hub-radius for motorcycles). 2. BALL: N52-class neo, potted and captive — the swallowing-hazard sealed-shell law applies double on the kids' versions. 3. COILS: segmented windings around the torus, even spacing. 4. POWER: bridge + capacitor + LED per segment or shared bus. 5. MOUNT: spoke clip-ons (bicycles, kids) / mechanical fasteners at hub radius (motorcycles). 6. BENCH PROOF: spin the wheel by hand — light at walking pace, brighter on the stop. That is the whole acceptance test.

§7 — CROSS-PHASE (INLINED IN FULL)

241 — the parent family: the Forever Light ball and its amendments; the loops are the hoop version, and 241 keeps its own copy of this doctrine. 142 — the phosphor law: cold extends the glow; the parked vehicle holds its marker light on persistence alone. 243 — the toy arm: the snow globe lineage; the hoola hoop is its cousin. 241 AMENDMENT 2 — the sealed-shell law: no loose balls, ever; breakaway clasps on anything a child wears.

§8 — DO-NOT-BUILD

NO LOOSE BALLS. The ball is captive in the sealed hoop — the sealed-shell law applies double on the kids' versions. NO RIM MOUNTS AT MOTORCYCLE SPEED — hub radius only; rim speed punishes imbalance and pins the ball to the wall. NO BATTERIES. The point is the point: a battery in this product is a confession that you did not read the manual. NO CONTINUOUS SINGLE WINDING — segmented coils, serviceable, per the seated spec.

§9 — OWED (THE BENCH LIST)

Coil segment count against rim diameter and road speed; phosphor load against glow persistence; clip fatigue on spoke mounts; hub-radius fastener set per motorcycle wheel family. All bench items, all priced in evenings, not budgets.

§10 — STATUS / PROVENANCE / CHANGE CONTROL

FIRST-VERSION LAW: until he publishes it, it is still first version. PROVENANCE: doctrine — Archer Quinn (Phase 241 Amendment 4, verbatim); grading and this standalone manual — the audit, from the master record, under his order of 27 August 2026. CHANGE CONTROL: the master wins; corrections are additive; nothing is deleted except on his kill word. The register line for Phase 66B enters the master by his hand.

END OF CHAPTER 66B
