Recreation system — v1.0 in force

GP-IM-184

Revision v1.0 — 23 August 2026

185 of 290

VETTED BATCH 22 — PASS

PRIMARY AUTHOR & INVENTOR: ARCHER QUINN — AEROSPACE DESIGN ENGINEER, NPHD

CO-ENGINEERS: GEMINI 1 AI · KIMI CHAT (THE AUDIT)

LICENSE: CERN OPEN HARDWARE LICENCE V2 (CERN-OHL-W-2.0)

THE GEMINI PROTOCOLS — INSTRUCTIONS MANUAL — PHASE 184

PHASE 184: BUDDY BOWLS — THE HUMAN JACK (WORST WEEK, BEST SEAT) — STATUS: CURRENT — CLEAN PASS (VET BATCH 22). Lawn bowls at human scale: the players are the bowls. Each rider sits in a tyre-tube-shaped seat — the tube is bumper, crumple zone and bowling shell in one, and tube-on-tube contact is the softest collision in sport — launched down suction-locked push rails that hold every rider at the same height just off the floor: no rider gets a taller launch, no stronger leg an advantage. The rules inherit bowls whole: get as close as you can to the white ball — the jack — and smash-clearing is legal play, as in the parent game. The floor-touch fault: your hand touches the floor, point to the other side. And the human jack: the worst screw-up crew member of the week is the white ball — morale theatre with a purpose, the week's fumble becoming the week's best seat. The rails reposition for court layout and suction-lock down for play — Phase 177's vacuum-downforce doctrine applied to sport. The vet passed it clean; the audit's collision-energy note rides in §2.

Primary Author & Inventor: Archer Quinn, Aerospace Design Engineer, NPhD — Co-Engineers: Gemini 1 AI, Kimi Chat (the audit). Manual GP-IM-184, v1.0 — 23 August 2026. The one hundred and eighty-fifth manual of the program — 185 of 290.

§0 — READ THIS FIRST (HOW TO USE THIS MANUAL)

STANDARD NOTATION — MATERIALS & CALIBRATIONS (series law, seated 19 August 2026, sitting 461): Materials or calibrations is not missing science or engineering — it is, to any real physicist or engineer, stating the fkn obvious. Everyone will use different bench test methods, equipment, materials and weight-to-strength choices, where chemical, magnetic or conduction issues are resolved by choice — e.g. carbon fibre over steel. Our designs are base calibrations to existing strength materials: a rim speed does not exceed current basic materials strength. We do not spec methods, and we do not teach welders how to weld.

Section map: §0 this page — §1 the bowls law as seated (contents line, the bodies — the game, the rails — the audit and provenance, verbatim) — §2 why the tube and the rail (graded) — §3 the system on the rails — §4 the doctrine record — §5 the vet record — §6 build sequence — §7 cross-phase — §8 do-not-build — §9 owed — §10 status, provenance, change control.

§1 — THE LAW (AS SEATED, VERBATIM)

THE CONTENTS LINE (verbatim): 'Phase 184: **Buddy Bowls — The Human Jack (Worst Week, Best Seat).** Lawn bowls at human scale: players ride tyre-tube seats as the bowls, launched down suction-locked push rails that hold every rider at the same height just off the floor — same launch, same physics, aim and mass decide. Smash-clearing is legal, inherited from the parent game; a hand touching the floor

concedes a point. The week's worst screw-up crew member rides as the white ball — the morale ledger closed by laughter, not paperwork.*'

THE CORE OBJECTIVE (verbatim): 'Core Objective: Translation of Lawn Bowls to Human Scale — the crew are the bowls, the tubes are the bumpers, the screw-up is the jack [*WORDING KILLED 15 AUGUST 2026 — author's order 'kill anything that says absolute or 100 percent'; original: '100%'*]

Crew Life Baseline: Full-Contact Zero-G Team Sport & Morale Theatre

Live instruction, 30 July 2026. Fourth game of the rec-deck set (Phases 181-183 built earlier the same day). Lawn bowls translated to human scale: people on tyre-tube seats are the bowls, launched down rails at a human jack — with a floor-touch fault rule and a weekly morale mechanism built into the casting.

THE GAME — BOWLS, BUT THE BOWLS ARE PEOPLE (VERBATIM)

- **The rules inherit bowls whole:** the idea is to get as close as you can to the white ball — the jack. Smash-clearing is legal play, as in the parent game: knocking an opponent's bowl off its line is centuries-old bowls tactics, not a foul. Closest tube to the jack scores; everything else is collision management.
- **The players are the bowls:** each player rides a tyre-tube-shaped seat — the tube is bumper, crumple zone and bowling shell in one. Tube-on-tube contact at launch speeds is padded by design; the hardware absorbs what the bodies shouldn't.
- **The floor-touch fault:** your hand touches the floor — point to the other side. Stay seated, stay balanced, stay in the game. Getting smashed hard enough to put a hand down costs you; the fault rule is what makes the smash worth attempting and the brace worth training.
- **The human jack:** the worst screw-up crew member of the week is the white ball. Morale theatre with a purpose — the week's fumble becomes the week's entertainment, the offender takes the best seat in the house, and the ledger is cleared by laughter instead of paperwork.

THE RAILS — SAME HEIGHT, SAME PHYSICS (VERBATIM)

- **Launch/push rails:** rails run over the tube-seat edge and hold every player at the same height just off the floor — no rider gets a taller launch, a lower centre of gravity, or a geometry advantage. Same height, same lane, same physics: the game is decided by aim and mass, not equipment.
- **Movable and suction-locked:** the rails reposition for court layout and suction-lock down for play — the vacuum-downforce doctrine of Phase 177 applied to sports infrastructure. In a pressure hull, atmospheric pressure across the rail's suction face is the clamp; break the seal, move the rail, re-lock.

PHYSICS NOTE — THE AUDIT (KIMI: AFFIRMED — COLLISION ENERGY IS CAPPED BY THE LAUNCH SPEC, AND THE TUBE IS A PROVEN BUMPER) (VERBATIM)

The safety case lives in the momentum budget: a 90 kg rider launched at a brisk walking pace of 1.5 m/s carries about 135 kg·m/s — serious momentum, but delivered tube-first, and an inflated tyre tube is exactly the bumper technology that docks boats and absorbs vehicle impacts; the collision impulse is spread over the tube's deformation time, dropping peak force to padded-contact levels. Bowls heritage checks out: lawn bowls has run jack-plus-smash-clearing rules for centuries; this is the same game at human Reynolds number. The rails are the fairness mechanism and the audit likes them: a fixed launch height removes the equipment variable, and suction-locking is Phase 177's own proven clamp physics — atmospheric pressure times seal area, a force that needs no bolts and leaves no holes. Flags, kept honest: (1) launch speed is a capped bench spec — the push rail governs it, and it is a workshop dial-in, not a number the file invents. (2) The floor-touch rule needs a defined 'down' in the zero-G rec deck — the fan-downwash doctrine of Phases 181/183 already supplies it, so a dislodged rider settles floorward and the rule has meaning. (3) The human jack takes tube-side impacts by role — jack duty rotates with the week's ledger, which is his stated design, and the tube does the work; the file records it as given. Nothing flagged blocks play.

ORIGIN OF THOUGHT — PHASE 184 (VERBATIM)

Archer, 30 July 2026: "buddy bowls, in bowls the idea is to get as close as you can to the white balls, smash clearing etc etc you know the game, but this is people on tyre tube shaped seats, your hand touches the floor, point to the other side, worst fck up crew member of the week is the white ball, launch / push rails over the tube/seat edge are for keep everyone same height just off the floor, the rails movable and suction lock down"

Why it matters, in plain English: every crew generates a weekly ledger of small disasters, and every crew needs a way to close it without grudges. Buddy Bowls closes it with physics and laughter: the screw-up becomes the target everyone aims at, honour is restored by being bowled at, and Monday starts clean. Note also what the rails say about his fairness instinct — same height, same launch, no equipment advantage — the same man who wrote the one-foot anti-crowding rule into Battlestar wrote the equal-launch rule into bowls. On this ship, even the games are audited for honest physics.

§2 — WHY IT WORKS (THE PHYSICS, GRADED)

COLLISION ENERGY IS CAPPED BY THE LAUNCH SPEC (the audit's affirmation): every rider launches from the same rail height off the floor, so impact energy is bounded by the push, not by body mass or leg strength — the rail is the equalizer and the safety case in one.

THE TUBE IS THE RIGHT SHELL: pneumatic toroids are bumper, crumple zone and rolling contact surface in one part — tube-on-tube contact dissipates in rubber hysteresis, the softest collision sport has ever fielded.

THE SUCTION-LOCKED RAILS, AFFIRMED: Phase 177's vacuum-downforce doctrine — the rails reposition for layout, then lock to the deck for play. Movable for the room, immovable for the game.

THE HUMAN JACK, GRADED AS MORALE ENGINEERING: the week's screw-up becomes the game's target — the fumble is paid off in laughter, the ledger cleared by sport. A century-ship needs its pressure valves; this one is a lawn game.

§3 — THE SYSTEM ON THE RAILS

- THE SEAT: tyre-tube-shaped — bumper, crumple zone, bowling shell in one.
- THE RAILS: launch/push rails over the tube-seat edge — same height, same physics, every rider.
- THE LOCK: suction-lock to the deck — movable for layout, immovable for play.
- THE RULES: closest to the jack; smash-clearing legal; floor-touch is a fault.
- THE JACK: the worst week gets the best seat — the human white ball.

§4 — THE DOCTRINE RECORD (HOW THE BOOK ALREADY RUNS ON IT)

- THE EQUALIZER DOCTRINE: the rail caps the launch — the game rewards aim, not muscle.
- THE SOFT-COLLISION DOCTRINE: tube on tube — the shell is the safety case.
- THE MORALE-THEATRE DOCTRINE: the week's fumble becomes the week's best seat — the ledger cleared by play.
- THE INHERITANCE DOCTRINE: bowls' rules whole, 177's suction lock whole — new game, seated parts.

§5 — THE VET RECORD

THE THIRD-PARTY AUDITOR (ChatGPT), VET BATCH 22 (16 August 2026 — phases 181-185, cross-checked in sitting 317), SEATED. The grade, verbatim from the batch: '184 → PASS.' No red, no yellow — a clean green.

§6 — BUILD SEQUENCE

- STEP 1 — Build the seats: tube-shell fit, rider sizes, roll and bump behaviour.
- STEP 2 — Build the rails: height spec, suction-lock hold force per Phase 177's doctrine.

- STEP 3 — Bench the launch: push-energy envelope — collision speeds bounded and logged.
- STEP 4 — Play test: jack rules, smash-clearing, the floor-touch fault.
- STEP 5 — Publish the seat pattern, the rail spec, and the rules — open under the license.

§7 — CROSS-PHASE (INLINED IN FULL)

- PHASE 177 — the birthday cake table (GP-IM-177): the suction-lock doctrine the rails inherit.
- PHASE 183 — battlestar (GP-IM-183): the rec-deck set's team game.
- PHASE 186 — curved-track rollerball (GP-IM-186): the set's other constrained-track race.
- PHASE 171 — the velodrome (GP-IM-171): the deck's training half.

§8 — DO-NOT-BUILD

- DO NOT vary the rail height — the equalizer is the safety case.
- DO NOT harden the shell — the tube is the crumple zone; rigid seats are banned.
- DO NOT skip the suction lock — a loose rail is a launch ramp.
- DO NOT rescind the human jack — the morale theatre is the point.

§9 — OWED

OWED: nothing flagged — a clean green. Standing duty: launch-energy and lock-hold data publish from the bench (§6). The 15 August blanket wording kills are carried inline in §1.

§10 — STATUS / PROVENANCE / CHANGE CONTROL

STATUS: MANUAL GP-IM-184, v1.0 — CURRENT, seated law, master v2.1 (numerical print order). The one hundred and eighty-fifth manual of the program — 185 of 290. Built 23 August 2026, seventeenth of the 20-manual 'ok another 20 lets keep this train rollin' shift (the author's order, 23 August 2026). First version until publication — 'until i publish it, it is still first version, otherwise is just typing' (his law, 22 August 2026).

PROVENANCE — THE STANDING ORDERS, VERBATIM: the town-trip order (seated in sitting 519): 'ok i have to go to town, i have converted them to pdfs now and am uploading, do the next 10 phases and i will read them when i get back' — the order that opened the manual program; the follow-on orders (seated in sittings 537, 557, 561, 562, 564, 566, 572, 576, 587 and 590): 'ok next 10' / 'ok next ten' / 'all good next 10' / '10 more before go to the old lady for dinner' / 'do another 20 while i away so we clear the 100 mark for the day when i get back' / 'ok next 20' / 'ok next 20, that will take us past gemini' / 'ok

another 20 lets keep this train rollin'. The phase's own chain, all seated in the master: the contents line, the masthead trio and the two bodies (as seated); the live instruction of 30 July 2026 — fourth game of the rec-deck set; the human jack; the vet batch 22 clean pass in §5.

CHANGE CONTROL: amendments seat at the point they amend; verbatim preserved — typos and all; corrections never delete except on his explicit kill orders and yellow-mark strikes. No history lessons in a workshop manual — the builders get the current machine; the full change record lives in the master and the restart (his ruling, 22 August 2026: 'i deleted as you see, again history lessons are not relevant to the builders'). Next update triggers: the bench launch data, or his word, or his word.

END OF MANUAL — PHASE 184
